First in the YA bestselling fantasy trilogy of the battle between Light and Dark. "If you loved the Twilight series, you will love this book."—Giuliana Rancic, E! News anchor Caroline Ellis' sixteenth birthday sets into motion a series of events that have been fated for centuries. A descendant of Virginia Dare, the first child born in the lost colony of Roanoke, and unaware of her birthright as the heir to the throne of the Light Fae, it isn't until Caroline begins a tumultuous relationship with Devilyn Reilly that the truth of her heritage is revealed. Devilyn is the only Fae who is both of the Light and of the Dark, and struggles to maintain that precarious balance to avoid succumbing to the power of the Dark within him. He is the only one who can save Caroline from those who would destroy her and destroy all hope for unity among the Fae. He promises Caroline that he will protect her at all costs, even when it means protecting her from himself. Told from the alternating perspectives of Caroline and Devilyn, Fae draws on mysteries, myths and legends to create a world, and a romance, dangerously poised between Light and Dark. Praise for the Fae trilogy "A phenomenal series."—Margaret Stohl, #1 New York Times bestselling coauthor of Jo & Laurie "Lovers you must buy a copy!"—Nicky Whelan, actress, Hall Pass, Franklin & Bash "Since the Twilight series recently came to an end, the search for the next hit teen novel is on. Fortunately, with C.J. Abedi's first book in the Fae series, there may be no need to look any further."—Firsttoknow.com

The world of scholarship is changing rapidly. Increasing demands on scholars, the growing size and complexity of questions and problems to be addressed, and advances in sophistication of data collection, analysis, and presentation require new approaches to scholarship. A ubiquitous, open information infrastructure for scholarship, consisting of linked open data, open-source software tools, and a community committed to sustainability are emerging to meet the needs of scholars today. This book provides an introduction to VIVO, <http://vivoweb.org/>, a tool for representing information about research and researchers -- their scholarly works, research interests, and organizational relationships. VIVO provides an expressive ontology, tools for managing the ontology, and a platform for using the ontology to create and manage linked open data for scholarship and discovery. Begun as a project at Cornell and further developed by an NIH funded consortium, VIVO is now being established as an open-source project with community participation from around the world. By the end of 2012, over 20 countries and 50 organizations will provide information in VIVO format on more than one million researchers and research staff, including publications, research resources, events, funding, courses taught, and other scholarly activity. The rapid growth of VIVO and of VIVO-compatible data sources speaks to the fundamental need to transform scholarship for the 21st century. Table of Contents: Scholarly Networking Needs and Desires / The VIVO Ontology / Implementing VIVO and Filling It with Life / Case Study: University of Colorado at Boulder / Case Study: Weill Cornell Medical College / Extending VIVO / Analyzing and Visualizing VIVO Data / The Future of VIVO: Growing the Community

Networking for Big Data supplies an unprecedented look at cutting-edge research on the networking and communication aspects of Big Data. Starting with a comprehensive introduction to Big Data and its networking issues, it offers deep technical coverage of both theory and applications. Focusing on key networking issues in Big Data, the book explains network design and implementation for Big Data. It examines how network topology impacts data collection and explores Big Data storage and resource management. Addresses the virtual machine placement problem Describes widespread network and information security technologies for Big Data Explores network configuration and flow scheduling for Big Data applications Presents a systematic set of techniques that optimize throughput and improve bandwidth for efficient Big Data transfer on the Internet Tackles the trade-off problem between energy efficiency and service resiliency The book covers distributed Big Data storage and retrieval as well as security, trust, and privacy protection for Big Data collection, storage, and search. It discusses the use of cloud infrastructures and highlights its benefits to overcome the identified issues and to provide new approaches for managing huge volumes of heterogeneous data. The text concludes by proposing an innovative user data profile-aware policy-based network management framework that can help you exploit and differentiate user data profiles to achieve better power efficiency and optimized resource management.
