Activity of female reproductive system is controlled by sex glands: ovaries produced the female sex
hormones, such as estrogen and progesterone. Influence of sex hormones is evident in the development of so-
called secondary sexual character: constitution, breast, typical female hair pattern.

Female Reproductive System Diagram Se 6 Answers

The female reproductive system makes its own hormones that help to control a woman's monthly cycle. These hormones cause ova to develop and be released in a monthly cycle. This process is called ovulation. If one of these ova is fertilised by a male sperm, this leads to pregnancy. The hormones also create the right conditions in the womb ...

Female Reproductive System simple explanation - YouTube

The female reproductive system is made up of the internal and external sex organs that function in reproduction of new offspring. In humans, the female reproductive system is immature at birth and develops to maturity at puberty to be able to produce gametes, and to carry a foetus to full term. The internal sex organs are the uterus, Fallopian tubes, and ovaries.
